(54) Title of the Invention:

Carbazole-containing Nonlinear Photoelectric Compound and Method for  
manufacturing Optical Device using the Compound

Abstract:

A nonlinear photoelectric compound having formula (1) below and a method for  
manufacturing an optical waveguide device using the nonlinear photoelectric compound as  
an organo-photoelectric compound and polyimide as a polymer medium are provided:

where R1 is a C1-C10 alkyl group, an C2-C10 alkyl group with alcohol-substituted end, or

a substituted or unsubstituted phenyl or naphthal group; R2 is a nitro group, a C1-C10 alkylsulfonyl group, a C2-C10 alkylsulfonyl group with alcohol-substituted end, or a substituted or unsubstituted phenylsulfonyl group; and X is carbon or nitrogen. The nonlinear photoelectric compound has excellent electrooptical characteristics and does not thermally decompose and sublimate even at above 250°C. An optical device with low optical transmission loss can be manufactured using the nonlinear photoelectric compound.
